TO-DO App Development

1. Task Title: To-Do App development using HTML , CSS and JavaScript.
2. Task Description: **Develop a web-based To-Do List application Using HTML, CSS, and JavaScript. The Application should allow user to add, delete, and managed in visually appealing and user-friendly interface.**

3. Step Taken:

1. **Add Task:**
 - Users should be able to add tasks to the list.
 - The input field should allow users to enter task descriptions.
 - Tasks should be added to the list when the user clicks the "Add Task" button or presses the Enter key.
 2. **Delete Task:**
 - Each task in the list should have a delete button.
 - Clicking the delete button should remove the corresponding task from the list.

3. Challenges faced: In this project one thing is more challenging , how to make a TO-Do list . but thanks to youtube and google from there I have studied of this and implement in this project
4. Solution Implemented: This is the best option to add or delete data by using this Web App.
5. Learnings: Day to day , I have learnt related to web technology like Html , CSS, javascript. This is the most profitable things that I am learning here . It is very helpful for me in future either join any software company or own company where will use these technology.
6. Project Update: In future I will add-on more option as per company requirement.
